KINERGY *ECO²*

The smarter choice beyond safer driving

KINERGY^{ECO2}

K435

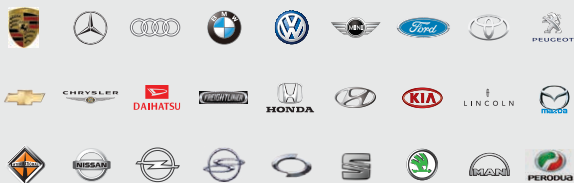

The Kinergy ECO² has been developed for modern small, compact and mid-range vehicles.

Performance

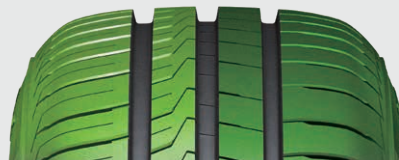

- Like its predecessor, which returned very good test results, the Kinergy ECO² is a top performer in its class.
- Optimizing rolling resistance along with a further increase in mileage and noise reduction without compromising a solid performance in wet and dry conditions.

Hankook original equipment for brands including:

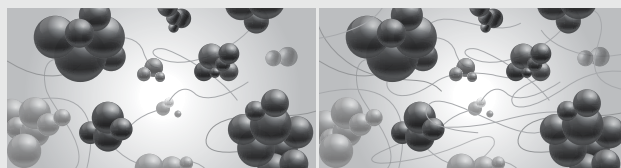

Optimised dry weather performance

An enhanced outside block stiffness delivers optimal handling performance.

Improved traction performance

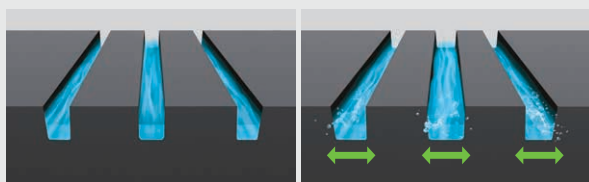

A high grip silica compound improves dry and wet traction and lower rolling resistance.

Better crosslinking

Outstanding wet weather performance

Optimal widths and positioning of the three channel grooves ensures excellent performance in wet driving conditions. Wide outer grooves provide maximum water evacuation which promotes wet traction.

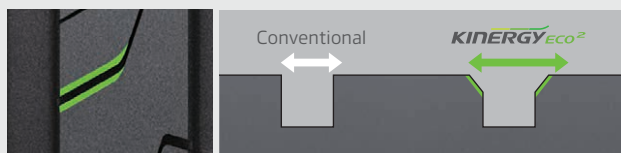

Conventional

KINERGY^{ECO2}

Optimum chamfer

Allows the contact area to widen instantaneously when braking, improving traction performance.

Wide lateral shoulder grooves

Wide lateral grooves incorporated in to the inside blocks deliver hydroplaning resistance for excellent wet handling and braking.
